Batch : A3

Case Study 09 : Experiment: University Examination Rule System Using **final**

Keyword in Java

Source Code :

```
1. class ExaminationRules {
2.
3.     //Final variable : value can be assigned
4.     final double examinationFee = 1000.0;
5.
6.     //Final Method
7.     final void calculateResult(int marks)
8.     {
9.         if (marks >= 40)
10.            System.out.println("Result PASS");
11.        else
12.            System.out.println("Result FAIL");
13.    }
14.
15. }
16. //Final Class : cannot be inherited
17. final class ExaminationConfig{
18.     void displayConfig(){
19.         System.out.println("Examination Configuration");
20.         System.out.println("Examination Fees : Rs. 1000");
21.     }
22. }
23.
24. public class Rule_Sys {
25.
26.     public static void main(String[] args)
27.     {
28.         //Create ExaminationRules object
29.         ExaminationRules rules = new ExaminationRules();
30.
31.         System.out.println("Examination Free Rs. " +rules.examinationFee);
32.
33.         rules.calculateResult(75);
34.
35.         //Create Final class object
36.         ExaminationConfig config = new ExaminationConfig();
37.         config.displayConfig();
38.     }
39. }
40.
```
